

for new & replacement windows & for conservatories timberlook looks great

Timberlook PVC-u profile has an ovalo feature which replicates a traditional timber design. A matching ovalo bead for the fixed glazing units creates a uniform sight line and the appearance is further enhanced by the use of a slimline sculptured bead with white gasket in the opening window and door sashes.

Timberlook is available in white PVC-u finish and also with a Rosewood Mahogany or Light Oak Woodgrain foil. **Timberlook** windows & doors have internal beading for extra security and are manufactured to British Standard Kitemarks BS 7412 & BS 7950/7412.

- the most beautiful PVC-u window system available.

**TEST
REPORT**

KÖMMERLING PVC-u windows installed on the North Sea Coast were tested in 1985 by Süddeutsches, Kunststoff-Zentrum SKZ which concluded that after 15 years of natural weathering no negative changes were evident - Test Report 1604/85

ENVIRONMENTALLY FRIENDLY

system with
the traditional
features
of timber

Timberlook windows & doors are made
from KÖMMERLING PVC-u profile

KÖMMERLING use calcium/zinc (CaZn) stabilisers instead of lead in the PVC-u profile. Not only is this environmentally friendly (lead is not degradable) but calcium/zinc has a higher degree of weather resistance than lead stabilisers which means the sheen of the PVC-u profile will last longer and look better.

KÖMMERLING PVC-u profile is manufactured from polyethelene PVC-u compound instead of the industry standard acrylic and is also polished in the extrusion process to produce a gloss surface finish which looks brighter and cleaner.

KÖMMERLING
Europe's No.1 PVC-u Window Profile

Timberlook Windows & Conservatories

with better insulation and additional security features

FREE UPGRADE

to **Triple Shield** which has a 'u' value of 1.1
Double glazing with just k glass will lose nearly 60% more heat than **Triple Shield** Double Glazing will. Triple Shield also has 15% better light transmission and a neutral appearance as well as being cooler in summer.

Timberlook is a stylish PVC-u Profile which replicates the traditional design of high quality timber frames & is extruded in Germany by **KÖMMERLING**

FREE UPGRADE

from shootbolt locking to the **Roto Pincer High Security Sash** offering more than double the security of industry standard products & better protection from jemmying than a shootbolt. In addition all PVC-u profile is fully reinforced with steel.

£1000
compensation towards any loss will be paid by the manufacturer of Timberlook windows if entry is gained through the **Roto Pincer High Security Sash** in the fully locked position by a burglar during the course of a crime.

from shootbolts to the Roto Pincer High Security Sash

Tested to BS 7950 - 1997

Specification for enhanced security performance of casement and tilt & turn windows for domestic purposes

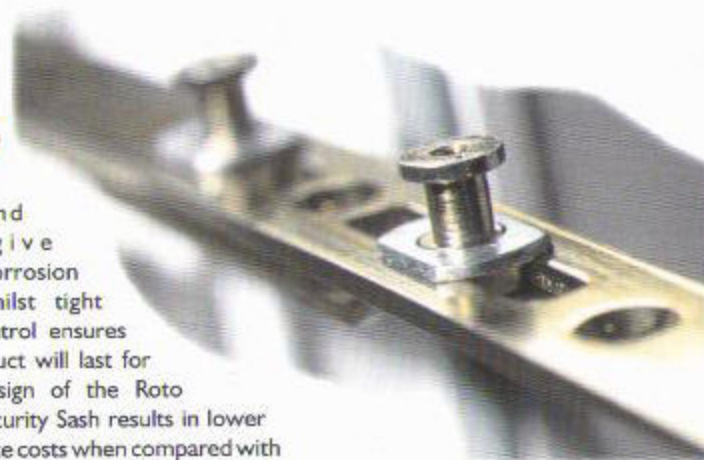

Passed test and when tested to destruction failure occurred at a force of 7.8kn. The force applied to pass the BS7950 test is between 1kn and 3.0kn.

Double the security

Loss of treasured possessions and damage to property are the obvious consequences of burglary, but the invasion of your home by a complete stranger can be particularly disturbing for you and your family. The Roto Pincer High Security Sash is a major breakthrough in window locking systems, offering more than double the security of industry standard products. The Roto Pincer High Security Sash is also fitted with 3 anti-jimmy devices making a total of 7 to 1 security fittings depending on the size of the sash. The Roto Pincer lock is manufactured by Roto Frank Germany's largest hardware manufacturer for the window industry supplying more than 50% of all the tilt & turn fittings used worldwide with an unrivalled reputation for the reliability and performance of their products..

Reliable

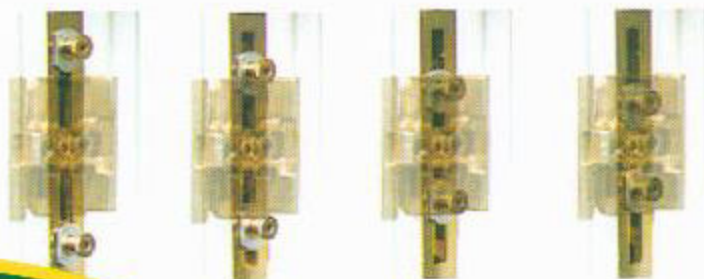

High quality materials and finishes give exceptional corrosion resistance, whilst tight production control ensures that each product will last for years. The design of the Roto Pincer High Security Sash results in lower after sales service costs when compared with a shootbolt locking system.

Easy to use & secure

Precision engineering provides smooth, effortless operation. With a simple turn of the handle the unique gearbox activates up to four pairs of high strength, 'mushroom pincers', simultaneously driving each pincer into a double-sided security striker from opposite directions.

This double action locking means that any attempt to force one pincer out of its closed position merely forces the opposing pincers deeper into their strikers, strengthening rather than weakening the system's security.

Choice of six handle colours

- Bright Bronze
- Satin Bronze
- Satin Chrome
- Bright Chrome
- White
- Gold

Matching Door Handles are also available

£1000
