

Advanced Floor & Wall System for Conservatories

Clay brick tiles bonded to a specially profiled building board and pointed. **No need for using bricklayers on site**

15mm high density insulation foam sandwich

8mm high density board for extra insulation and rigidity

Galvanised steel frame delivers a strong, lightweight construction, tailor-made for each job

The hollow frame with pre-cut channelling holes makes concealed wiring and plumbing quick and easy

18mm exterior grade tongue and groove chipboard allows for all types of floor covering

Heavy duty steel frame provides a strong sturdy base for a full height conservatory

Screw adjusters eliminate the need for full-scale footings

50mm polystyrene board provides superior underfloor insulation
